Allowable Subject Matter

The following is an examiner's statement of reasons for allowance: the prior art of record fails to teach an apparatus and method of controlling a sigma delta modulator, wherein a noise transfer function of the sigma-delta modulator establishes a maximum stable amplitude for the input signal; wherein the sigma-delta modulator comprises a loop filter and operates at a clock frequency that sets an over-sampling ratio; the method controlling the sigma delta modulator to change the noise transfer function in response to an output signal of the modulator or a state variable of the loop filter, and comprising steps of: processing the output signal of the modulator with a peak detector to determine a peak detector output, storing a running window of N previous samples of the peak detector output, where N is less than the oversampling ratio, selecting a maximum of the N previous samples to provide an intermediate control signal, deriving the control from the intermediate control signal such that the noise transfer function is changed to suppress quantization noise to a smaller extent when the output signal of the modulator or a state variable of the loop filter represents a relatively large amplitude, whereas when the output signal of the modulator or a state variable of the loop filter represents a relatively small amplitude, the noise transfer function is changed to suppress quantization noise to a larger extent.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
